

ANDRITZ FEED TECHNOLOGY

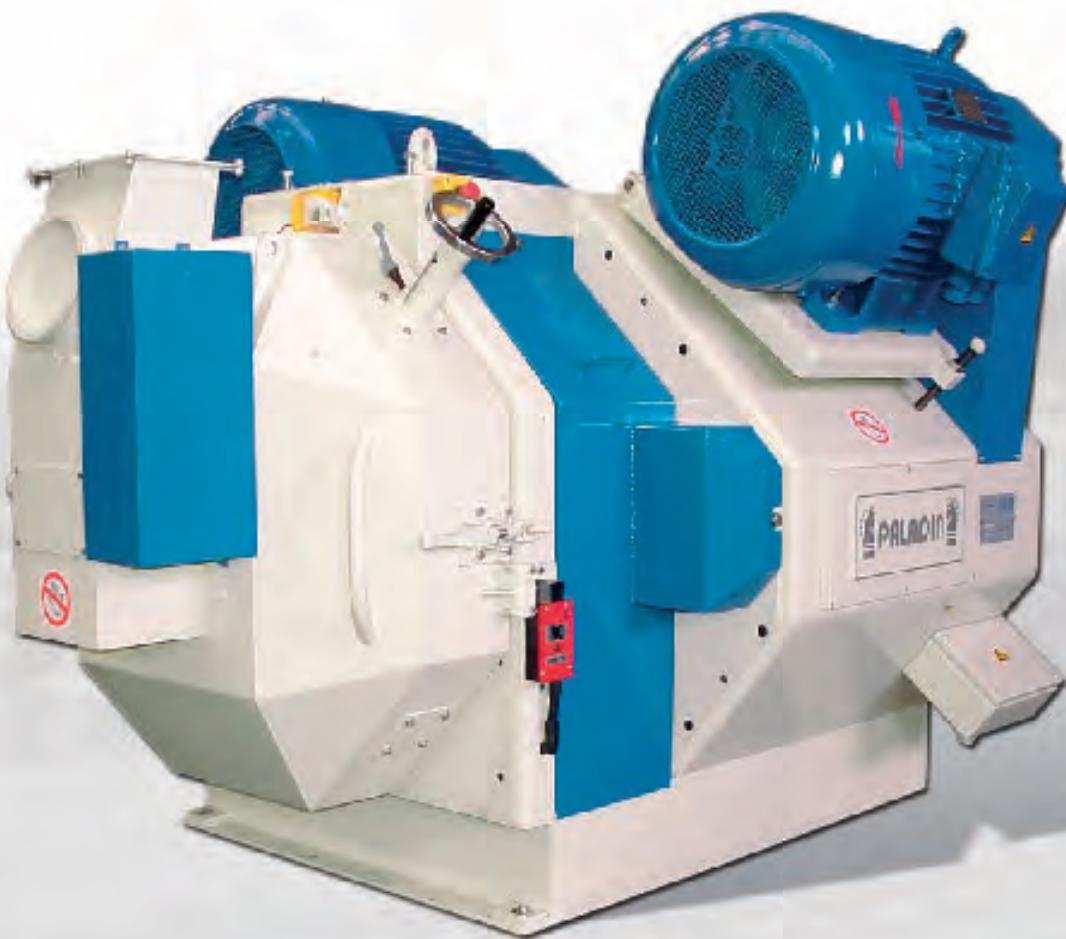

Paladin Prensas Granuladoras

ANDRITZ

Un concepto de diseño utilizado en más de 2.000 maquinas en funcionamiento

Desarrolladas a partir de un concepto de diseño testado en más de 2.000 máquinas funcionando en todo el mundo, la gama de prensas granuladoras Paladín continúa avanzando y ofreciendo seguridad, máxima eficacia, fácil manejo y mantenimiento.

Características estándar en la mayoría de las prensas granuladoras paladín

- Rigididad, construcción duradera para una amplia gama de aplicaciones.
- Todas las partes en contacto con el producto están fabricadas en acero inoxidable anti-desgaste.
- Prensas granuladoras de 2 o 3 rodillos.
- Ajuste manual de rodillos.
- Tapa matriz con efecto auto-pilotante que facilita el cambio de matriz
- Puerta con bisagras bien a la derecha o a la izquierda que permite el completo acceso a la cámara de granulado.
- Eje principal rodillo reforzado, mono-block, fabricado en acero inoxidable de la más alta calidad capaz de aguantar las más severas aplicaciones.
- Protección hidráulica de sobrecarga estándar en todos los modelos.
- Equipado con sistemas de seguridad que, en caso de irregularidades, detiene inmediatamente el molino de granulación.
- Variada gama de opciones

Características opcionales disponibles para la mayoría de las prensas granuladoras.

- Cámara de granulación fabricada en doble pared, tipo construcción sándwich, con aislamiento de calor y ruido.
- Ajuste automático de rodillos disponible en algunos modelos. El sistema permite distancia adicional entre los rodillos y la matriz y, además, sin componentes hidráulicos o electrónicos en la cavidad de la matriz.
- Las opciones de rosca de entrada y alimentador central facilitan una distribución uniforme de material a los rodillos de la prensa para granulación de baja densidad y, otras materias primas difíciles o materiales expandidos.
- Sistema automático de lubricación de grasa.
- Polipasto con herramientas de elevación para facilitar y asegurar el cambio de la matriz y su mantenimiento.
- Control de proceso computerizado para monitorizar todos los parámetros
- Gama de acondicionadores que facilitan una óptima retención de tiempo para requerimientos de capacidad específicos.

Factores que marcan la diferencia

Equipos de ingeniería altamente cualificados trabajan en permanente equipo con nuestros clientes para asegurar que las granuladoras Paladín satisfacen las necesidades de nuestros clientes usando tecnología punta.

①

Las granuladoras estándar Paladín van provistas de 2 o 3 rodillos.

Sistema de ajuste automático de rodillos

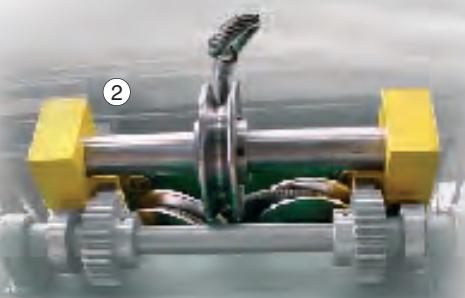

El sistema de ajuste automático de rodillos opcional permite la separación de rodillos desde el tablero de control. Ello aporta la ventaja de un rápido cambio de matriz y completo reajuste en menos pasos durante la operación, así como también el reajuste sin el riesgo de hacer rodar la matriz.

②

Polipasto de la matriz.

Un polipasto integral permite la fácil manipulación de las matrices, rodillos, platos frontales y conos de alimentación rotativos.

Polipasto hidráulico de la matriz en la gama Paladín 2000 y 3000.

②

①

Sistema de ajuste de rodillos

El sistema de ajuste de rodillos permite un rápido, simple y muy preciso ajuste de rodillos.

②

③

Cámara de granulación

La puerta de la cámara de granulación, de acero inoxidable, con cierre a la derecha o a la izquierda, según lo requiera la instalación, va provista de unas cuchillas calibradas ajustables para producir el tamaño de gránulo deseado.

④

La puerta va equipada con un dispositivo de seguridad para impedir la apertura de la máquina durante su funcionamiento.

③

④

5

Transmisión por correas trapezoidales

Las correas trapezoidales, que absorben los choques en la primera parte de la transmisión del motor, van equipadas con un sistema hidráulico o mecánico que mantiene la correcta tensión. Con este sistema las correas no patinan con lo cual las correas trapezoidales tienen una duración más larga.

6

Transmisión en dos fases

El sistema patentado de transmisión Paladín constituye la base para un sistema de transmisión ideal.

La combinación de resistentes correas trapezoidales, con una correa dentada de alta fuerza de rotación, reduce el nivel de ruidos; permite utilizar motores eléctricos estándares y la selección de una gama de velocidades de matrices.

5

6

7

8

5

6

7

8

Engrase automático

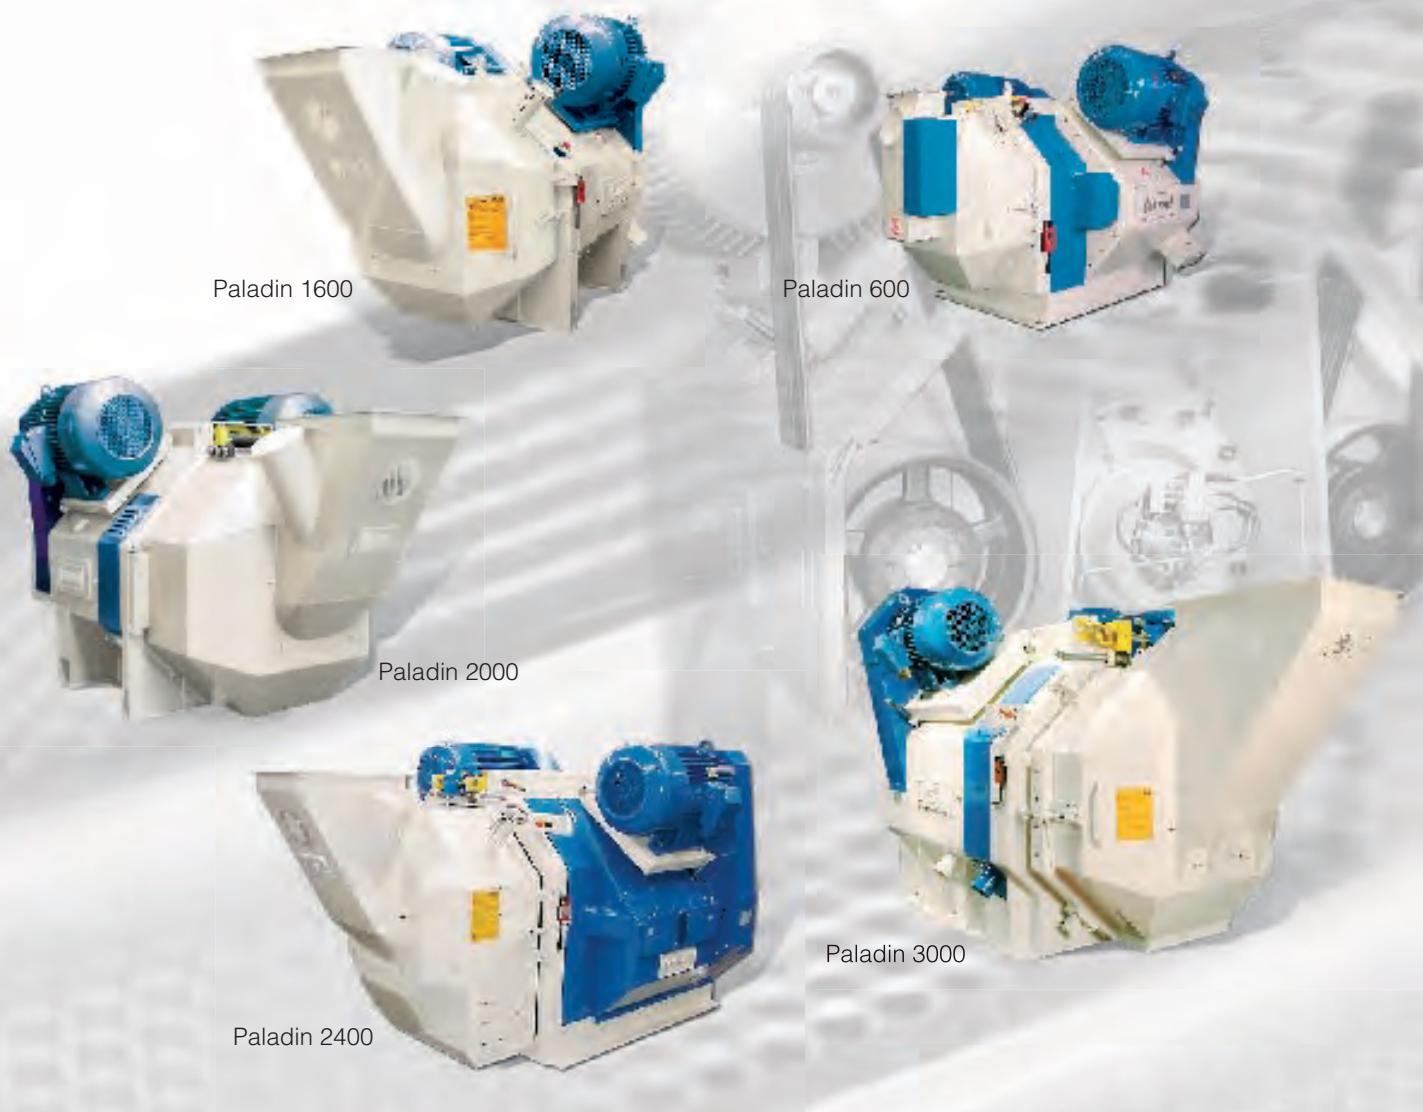

La Paladín va equipada con un sistema de engrase automático. Ello asegura una correcta lubricación de los rodillos de la prensa y rodamientos del eje principal.

7

Protección sobrecarga

El conjunto de matriz y rodillos está protegido por un sistema de protección de sobrecarga hidráulico o mecánico que detiene los motores principales cuando se produce una situación de sobre-carga. El re-montaje es rápido y sencillo.

*El sistema del autoajuste de rodillos es opcional.

Servicio post-venta

- Disponibilidad de una alta calidad de piezas y servicios de ingeniería

Ingenieros, con una muy amplia experiencia, procesan las soluciones de ambas marcas.

Los centros de servicio regionales UMT y distribuidores autorizados están preparados para ofrecerles asistencia y garantizar las operaciones de procesamiento más seguras.

Los ingenieros de proceso AFT están preparados para auditar plantas y ofrecer soporte ayudándole en la identificación, asegurando el incremento de la producción y, el correcto funcionamiento de su planta de proceso.

Las piezas de alta calidad y consumibles de AFT le ofrecen la más larga duración y la mejor economía durante el funcionamiento de su planta de proceso.

Por favor, contacte con su servicio local sobre como mejorar su proceso

Matrices y rodillos

Para todas las marcas de granuladoras

ADR (Andritz Dies & Rolls), - el fabricante más grande y más avanzado de matrices y rodillos.

Andritz Feed Technology le ofrece la máxima calidad en matrices y rodillos; satisface las necesidades específicas de cada cliente usando la maquinaria más avanzada y tratamiento térmico en aceros maleables de alta calidad, todo ello en combinación con nuestra experta ingeniería y conocimiento de proceso. Esto le permite un servicio óptimo para la planta granuladora, suministros de calidad y entregas programadas haciendo que su operación de granulado sea eficiente y fiable.

Las matrices y rodillos de calidad UMT mejoran la función de granulación.

PELLETING PRESS

TYPE PALADIN 600 B

Pelleting section – general description

The Paladin is of a sturdy, self contained design, with a combined V-rope and toothed belt transmission, provided through a balanced twin drive system. The design of the mainshaft allows applying of maximum torque on the pelleting section. These features make the Paladin Pelletmill range a universal adaptable machine whereby maximum reliability is provided under all working conditions.

Twin Drive

The twin drive ensures a smooth operation with low levels of vibrations. Lifetime of mainshaft is ensured because of the symmetrical load due to the two intermediate shafts driving the main toothed wheel. The die-speed is chosen based on the application. In case adjustment of speed is required the easy accessible pulleys can be changed.

Hydraulic system for Twin-Drive and Brake on Mainshaft

The V-belts of the two drives from the main motors are automatically tensioned with hydraulic cylinders. This system is also used to fixate the mainshaft with a special designed brake system. In the event that the mainshaft is turned due to overload it takes minimum downtime to position it in the original position. It also allows the operators to position the rollers in other positions for maximum efficient feed-distribution.

Symmetrical Die with tapered fit

The Paladin vertical ring-dies are all fully reversible. The correct number of bolts is applied for having a very sturdy fit which easily can be (dis)mantled.

Pelleting Chamber

For reducing the noise level all paladin doors are doubled skinned. The inlet has a pneumatic operated bypass which can be used for overload protection as well. Each paladin is standard equipped with an adjustable knife assembly. The roll-head is either in 2- or 3-roll design depending on the application. Through 40 years of experience the design of the front-plate has lead to a system with deflectors ensuring maximum feed-distribution.

Electrical system

The paladin is equipped with all necessary switches and sensors to allow a safe controllable operation of the machine. Except for the two Main-motors all of the electrical items in the Paladin are connected centrally into one Box.

Hoist for exchanging dies and rollers

The paladin standard equipped with a heavy duty retractable bar inside the housing. When rollers and/or dies are in need of exchange they can be lifted easily with the special tools. By means of loosening the brake on the mainshaft the rollers can easily be positioned centrally below the hoist.

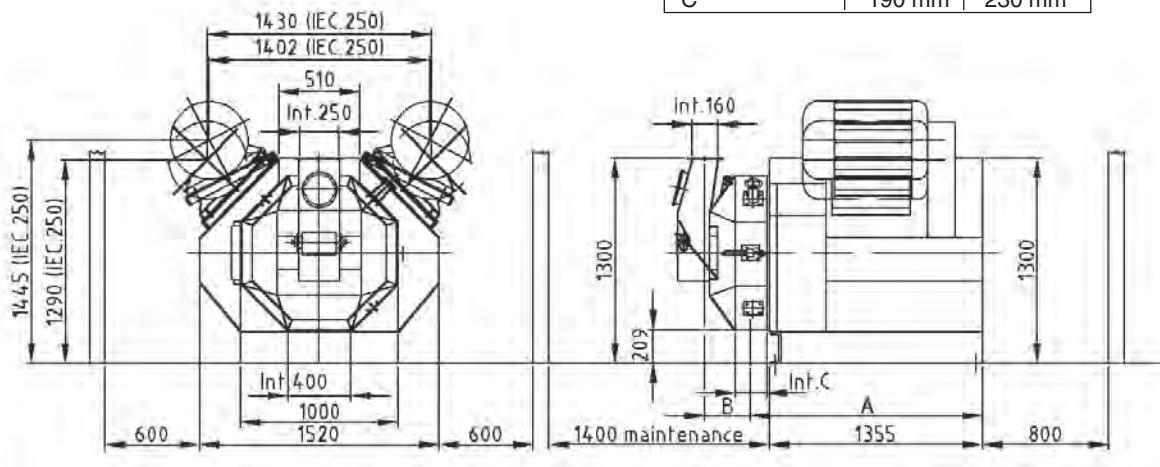

Accessories:

- Electric motors
- Set of tools
- Rolls with profile suiting the application
- Automatic greasing with flow control
- Electro pneumatically controlled grease lubrication system

- Electric motors
- Set of tools
- Rolls with profile suiting the application
- Automatic greasing with flow control
- Electro pneumatically controlled grease lubrication system

PELLETING PRESS

TYPE PALADIN 1600D

Dimensions in mm.

Technical data

Die Dimensions	
Die track diameter	850 mm
Width of die track	175 - 210 mm
Die speed	4,7 - 6,7 m/sec

Standard finishes:		
Press	Cream	RAL 1015
Guards	Blue	RAL 5017
Motors (if supplied with press)	Blue	RAL 5017

Main drive motors *)	
Number	2
Maximum power, each	110 kW
Speed	1500 rpm

Weights:		Max
Press with rolls		55 kN
Die		6 - 8 kN
Motors		14 - 18 kN
Static weight including motors		75 - 81 kN
Dynamic weight including motors		100 - 125 kN

Hydraulic oil pump	
Motor power	0,37 kw
Speed	900 rpm

External dimensions of packing:	
Length	2650 mm
Width	2400 mm
Height	2100 mm

PELLETING PRESS TYPE PALADIN 2000FM

Pelleting section – general description

The Paladin is of a sturdy, self contained design, with a combined V-rope and toothed belt transmission, provided through a balanced twin drive system. The design of the mainshaft allows applying of maximum torque on the pelleting section. These features make the Paladin Pelletmill range a universal adaptable machine whereby maximum reliability is provided under all working conditions.

Twin Drive

The twin drive ensures a smooth operation with low levels of vibrations. Lifetime of mainshaft is ensured because of the symmetrical load due to the two intermediate shafts driving the main toothed wheel. The die-speed is chosen based on the application. In case adjustment of speed is required the easy accessible pulleys can be changed.

Hydraulic system for Twin-Drive and Brake on Mainshaft

The V-belts of the two drives from the main motors are automatically tensioned with hydraulic cylinders. This system is also used to fixate the mainshaft with a special designed brake system. In the event that the mainshaft is turned due to overload it takes minimum downtime to position it in the original position. It also allows the operators to position the rollers in other positions for maximum efficient feed-distribution.

Symmetrical Die with tapered fit

The Paladin vertical ring-dies are all fully reversible. The correct number of bolts is applied for having a very sturdy fit which easily can be (dis)mantled.

Pelleting Chamber

For reducing the noise level all paladin doors are doubled skinned. The inlet has a pneumatic operated bypass which can be used for overload protection as well. Each paladin is standard equipped with an adjustable knife assembly. The roll-head is either in 2- or 3-roll design depending on the application. Through 40 years of experience the design of the front-plate has lead to a system with deflectors ensuring maximum feed-distribution.

Electrical system

The paladin is equipped with all necessary switches and sensors to allow a safe controllable operation of the machine. Except for the two Main-motors all of the electrical items in the Paladin are connected centrally into one Box.

Hoist for exchanging dies and rollers

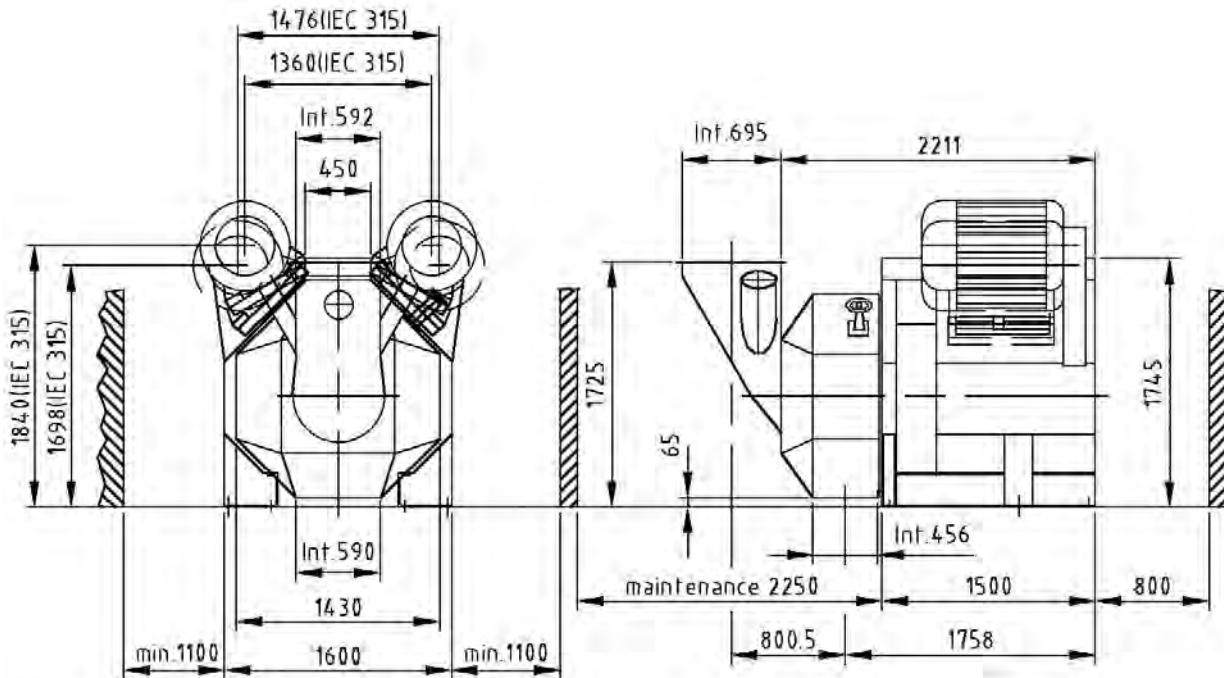

The paladin standard equipped with a heavy duty retractable bar inside the housing. When rollers and/or dies are in need of exchange they can be lifted easily with the special tools. By means of loosening the brake on the mainshaft the rollers can easily be positioned centrally below the hoist.

Accessories:

- Electric motors
- Set of tools
- Rolls with profile suiting the application
- Automatic greasing with flow control
- Electro pneumatically controlled grease lubrication system

PELLETING PRESS

TYPE PALADIN 2000FM

Technical data

Die Dimensions	
Die track diameter	880 mm
